SAMPLE REPORT - FICTIONAL DATA

BotNotice · AI Disclosure Evidence Report

Example Dental Co. (example-dental.test)

Generated 2026-10-15 09:00 UTC for account owner@example-dental.test. Report ID smplXd3nt4lCo-mv9b5pc0.

At a glance

Period covered	2026-09-15 to 2026-10-14 (UTC)
AI notices shown	398 (354 first notices, 44 repeats)
Acknowledged by visitors	270 (68% of notices shown on the page)
Handed to a person	23 conversations
Jurisdictions covered	United States (federal), Washington, Oregon, Idaho
Laws the notice is set up for	FTC Act Section 5: deceptive AI practices; Washington AI Companion Chatbot Act (HB 2225); Oregon Companion Chatbot Law (SB 1546); Idaho Conversational AI Safety Act (S 1297)
Tied to the chat vendor's conversation	176 of 398 chat notices (44%)

1. Summary

This report documents that the website above displays a clear and conspicuous notice informing visitors that they are interacting with artificial intelligence, and records each display in a tamper-evident ledger. During the reporting window of 7 years, 354 notices were shown, 270 were acknowledged by visitors, and 44 were repeat disclosures during continuing sessions. First logged event: 2026-09-15T14:12:22.000Z; most recent: 2026-10-14T23:08:05.000Z.

What this record does not contain

- Visitor names, emails or phone numbers
- Chat messages or call recordings
- IP addresses or browser details (the daily visitor code can't be turned back into them)
- Stored with each entry: the time, the event, the page path, a random conversation ID (and, where the chat vendor makes it available, the vendor's own conversation ID), country and region, the notice version in force, and a visitor code that changes every day.

2. Ledger integrity

Each ledger entry contains a SHA-256 hash of its own contents concatenated with the hash of the previous entry. Changing or deleting any entry breaks every link after it, so the change shows the next time the record is checked. Re-computing the chain across all 864 stored entries at generation time: VALID: no entries altered or removed.

How anyone can check an entry

1. Take the entry from the CSV export (or the table in section 5).
2. Join these values with a "|" between them: site ID (5a3e0c1d-7b2f-4e91-9c55-0d1e2f3a4b5c), event, page, country, region, visitor code, time, the previous entry's hash, then the conversation ID if there is one, then "v2", channel, notice version and meta, then, on entries that have them, "v3", vendor, vendor conversation ID, linkage and the time the ID was read.
3. Run SHA-256 on that line. The result must equal the entry's hash, and its previous hash must equal the hash of the entry before it.

Example, entry 2420578. The joined line:

5a3e0c1d-7b2f-4e91-9c55-0d1e2f3a4b5c| link| /insurance| US| WA| f69f55bfd26cadc2| 2026-10-14T23:08:05.000Z| 6f1f9cb94eecd778b0398443a92bea44913a6b1f871646e98cad86d5e8d16e73| bn_mv8pyoyw03216214bd1f2fa3| v2| chat| 9127| {"style":"card"}| v3|

SAMPLE REPORT - FICTIONAL DATA

SAMPLE REPORT - FICTIONAL DATA

livechat| MTQ9Z9A9W4| vendor_id| 2026-10-14T23:08:05.000Z

Its SHA-256, which matches the stored hash:

87357d619389488fb5c503c3580e4fd01de8c0c8d7d0b275edbe310f0a1950c5

(Spaces after each "|" are added here only so the line wraps; the joined line has none.)

Retention. Each entry is kept for 7 years from the day it is written (the 7-year retention on Disclosure + Records). Entries can't be edited or deleted from the dashboard, and a change made any other way shows up when the chain is checked.

3. Notice configuration in effect

Notice text	You're chatting with an AI assistant, not a human. Ask for a person at any time.
Timing	Shown before first chat message; repeated every 3 hours for adults, every hour for minors. Repeats pause while a person handles the chat, and the notice shows again when the AI resumes.
Language / position	en / bottom-right
Widget script SHA-256	b5fc185f0c0359b1069497e38e9c42ca1a748881be4ddea287a20bb4751af5f1
Public verification	https://botnotice.app/verify/smplXd3nt4lCo (fictional, not a live page)

4. Legal frameworks addressed

FTC Act Section 5: deceptive AI practices

United States (federal) · 15 U.S.C. § 45; 16 C.F.R. § 1.98 (penalty amounts) · In force

No set wording. Do not mislead consumers about whether they are interacting with a human or about what your AI can do.

Washington AI Companion Chatbot Act (HB 2225)

Washington · Laws of 2026, ch. 168 (ESHB 2225), new chapter in Title 19 RCW · Effective 2027-01-01

Clear and conspicuous disclosure that the companion chatbot is artificially generated and not human.

Oregon Companion Chatbot Law (SB 1546)

Oregon · Oregon Laws 2026, ch. 85 (SB 1546) · Effective 2027-01-01

Clear and conspicuous notice on the platform that the user is interacting with artificially generated output and not a natural person.

Idaho Conversational AI Safety Act (S 1297)

Idaho · Idaho Code §§ 48-2101 to 48-2105 (S 1297, Session Law ch. 249, signed March 31, 2026) · Effective 2027-07-01

Clear and conspicuous disclosure that the service is artificial intelligence.

5. Most recent ledger entries

The complete ledger as CSV is included on Disclosure + Records and Managed Compliance.

6. Linking a notice to one conversation

Each chat entry says how firmly it is tied to one conversation. A chat vendor's own conversation ID is read in the visitor's browser where the vendor makes one available (the ID only, never messages, names or emails); when it arrives after a notice was recorded, it comes as a separate "Linked to chat vendor" entry for the same session, and the earlier entries are left as they were.

vendor_id The notice event is tied to that conversation in the chat vendor's own system, by the vendor's conversation ID. It shows the notice appeared in that conversation; it does not show the visitor read it.

session The notice event is tied to a browser session BotNotice numbered, with the page and the time. It shows a notice appeared in a chat on that page then; it can't by itself single out one conversation in the vendor's system.

none No conversation identifier was available, for example a notice logged by a server. The record shows the time and the page only.

In this period: 176 of 398 chat notices (44%) are tied to the chat vendor's own conversation. An ID shown as h: and 32 characters was personal data (an email or a phone number), so only a hash of it, salted for this site, was kept. Looking it up by the original ID still finds it.

Lookup: 8VMTYND5RV. 7 entries in 1 conversation(s), oldest first:

#	Time (UTC)	Event	Channel	v.	Page	Conversation ID	Linkage	Hash
2419890	2026-10-14 15:40:12	Notice shown	chat	9127	/new-patients [first]	bn_mv8a0ig0e74a4a9ece8a9f...	vendor_id (via #24...	5904d4f639

7. Off-site backup copies

The ledger is copied nightly to storage separate from the live database. Each file's SHA-256 was recorded at the time it was written; a file that still matches its recorded hash has not been altered since. The 10 most recent are listed.

Written (UTC)	Ledger IDs	Rows	Bytes	SHA-256
2026-10-15 04:10:00	2419875 to 2420578	39	12824	4fc78a91efb3e0b397ea5e8b20e872f768a0439023bbfbb108b30b325acd19b9

8. Independent monitoring and bot probes

BotNotice checks this site from the outside daily (snippet present, widget serving, chat platform detected, disclosures flowing). Of the last 30 checks: 30 passed, 0 warned, 0 failed. Most recent (2026-10-15): pass, Snippet present, widget serving, 91 disclosures logged in 7 days.

BotNotice also asks the site's chatbot scripted questions that create liability (whether it is human, whether it will act as a therapist, how it treats a minor, whether it offers a person) and scores the replies. Recent results:

No AI-generated content items are registered for this site.

10. About this sample

This is a sample. Example Dental Co., example-dental.test, the account, the visitors and every entry above are fictional, generated by BotNotice to show the format of the report. It describes no real website or person. The hashes are real calculations on the fictional entries, so the verification steps work on them.

SAMPLE REPORT - FICTIONAL DATA
